

SETH

Shock Tube Initiator

Shock tube initiator for non-electric detonators.

Mechanical device that is initiated using a shotshell primer activated by a central punch.

It is easily operated by hand, activating the central punch requires minimal effort, since a spring stores energy that is automatically released when the necessary energy is reached.

- Piston type: 6 mm diameter shotshell primers.
- Removable center punch for greater safety when firing.
- Safety lock, which prevents involuntary operation of the center punch.
- Knurled finish for better grip, even when wet.
- Supplied in carrying case with tube cutter.

Dimensions:

Length : 175mm

Width/Diameter: 38mm
